

Mathematica 8 (Windows)

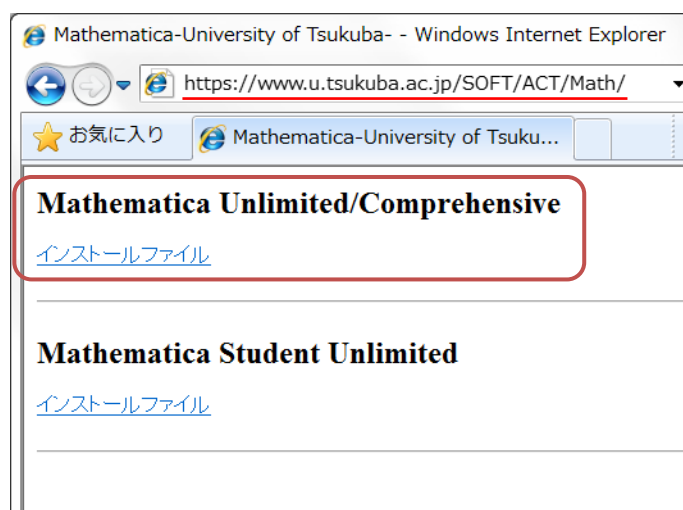

Installation manual for Mathematica under the Comprehensive Program for the Network License

- This manual is for faculty, staff and students who are not covered by the Unlimited Educational Program licensing on the university-managed computer terminals so that they may use Mathematica.
- Users do not need to be connected with the University network to install Mathematica, but on startup and also when using the application, it is required to be connected with the on-campus network (including the on-campus student residence) so there is a connection with the license server (mathematica.u.tsukuba.ac.jp).

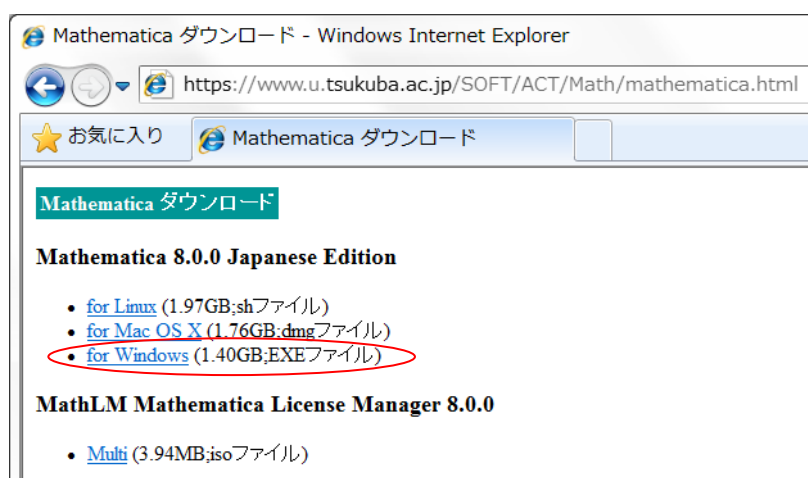

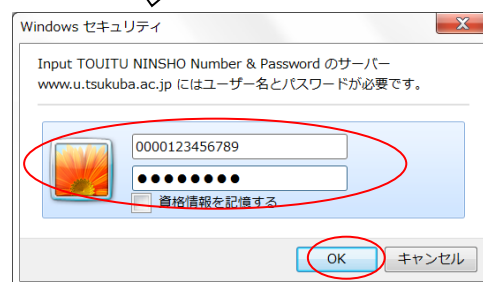

Obtaining Installation Program

- Using a computer terminal that is connected with the university network, start up the web browser, and enter the following URL: <https://www.u.tsukuba.ac.jp/SOFT/ACT/Math/>

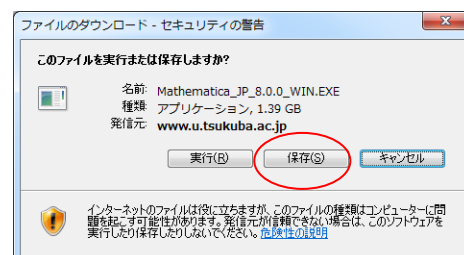

Click "Install the file" under Mathematica Unlimited/Comprehensive.

Users are asked to enter the Unified Authentication ID (13 digits) in the security dialog box, then click "OK".

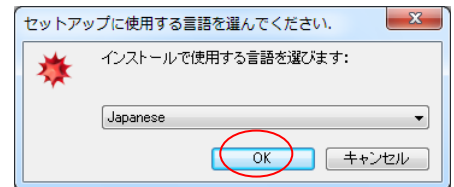

Right click "for Windows" and save the file onto your hard drive.

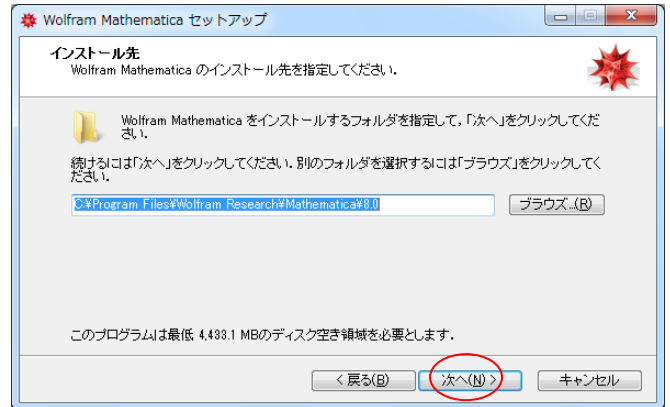

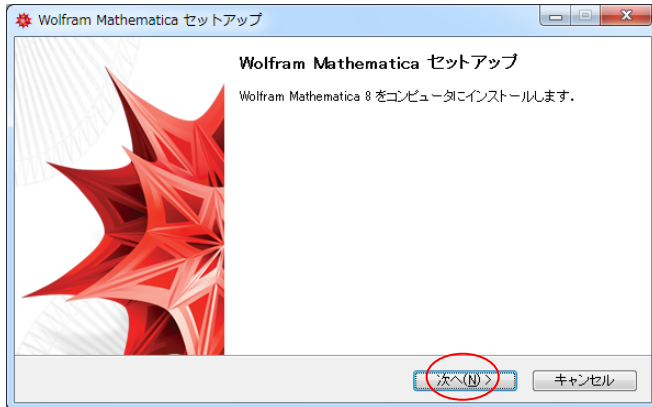

Run the installation program

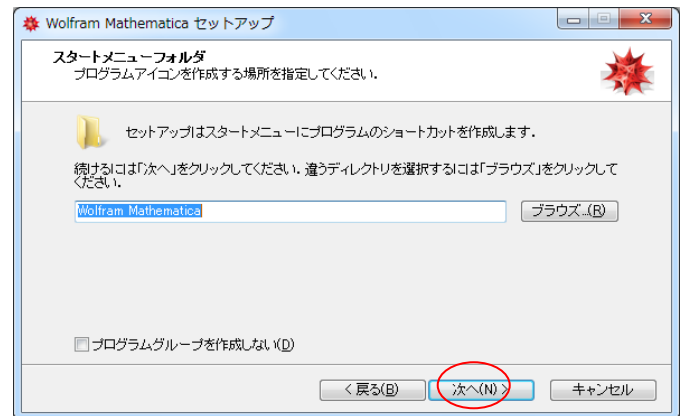

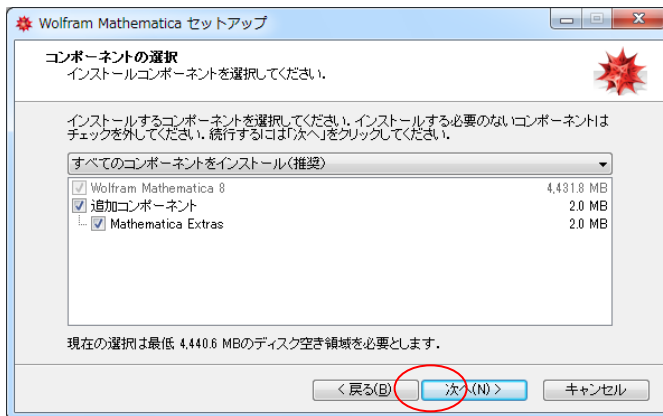

1. Double click on M-Student_JP_8.x.x_WIN.EXE (x signifies numerical numbers) to run the installation program. Select the installation language in the pull-down menu and click "OK".

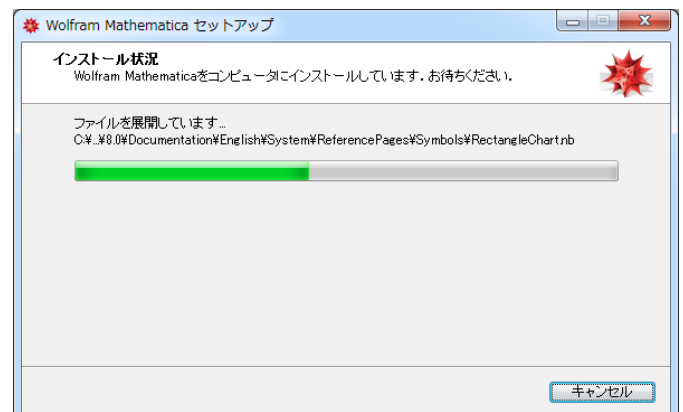

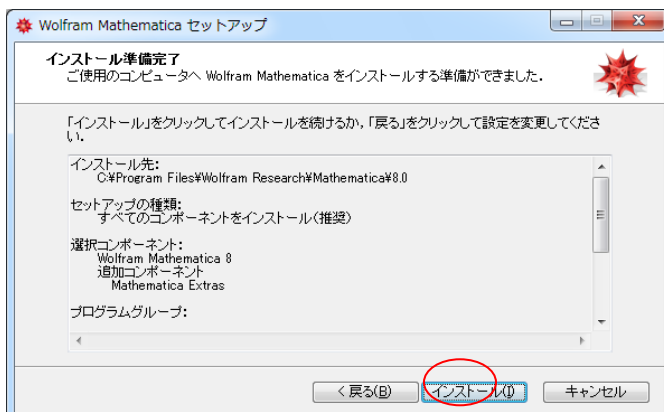

2. The Wolfram Mathematica Setup dialog box will appear. Click "Next".
3. A message asks the user to specify a folder to install Wolfram Mathematica. Under normal circumstances, click "Next", without changing the default location.

4. A message asks about the selection of components to be installed. Click "Next" without changing anything.
5. It also creates a short cut of the Mathematica program on the Start up Menu. Click "Next" without changing anything.

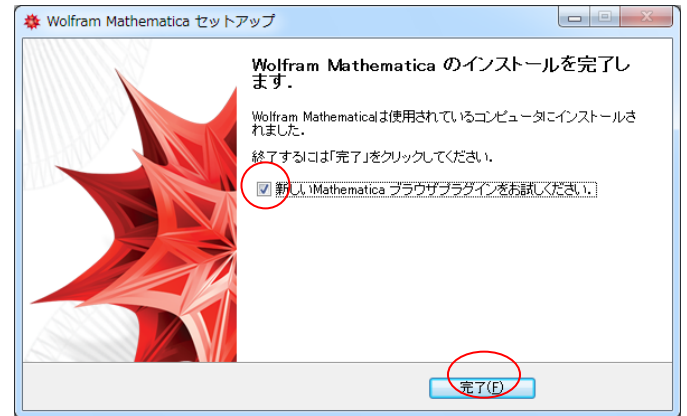

6. Preparation for installation is completed. Click "Install" to start the process of copying the files. Sit back and wait for a moment.

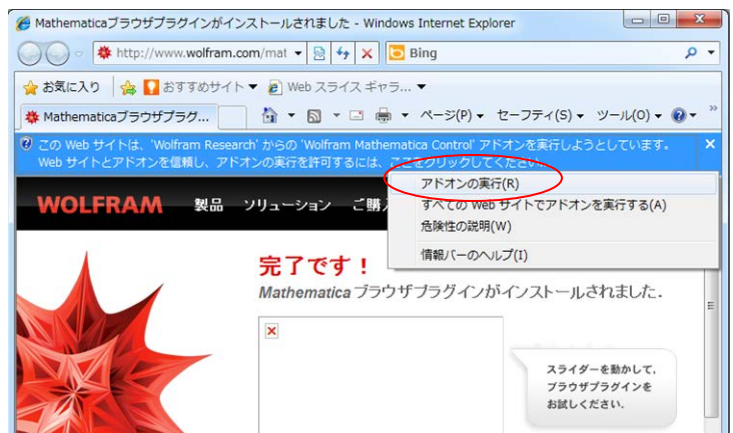

7. A message shows installation of the Mathematica program has been completed.
Click “Finish” to exit.

* If you ticked the box of “Try new Mathematica browser plugin”, refer to (steps #8~10) [Installing browser plugin for Mathematica] for details.

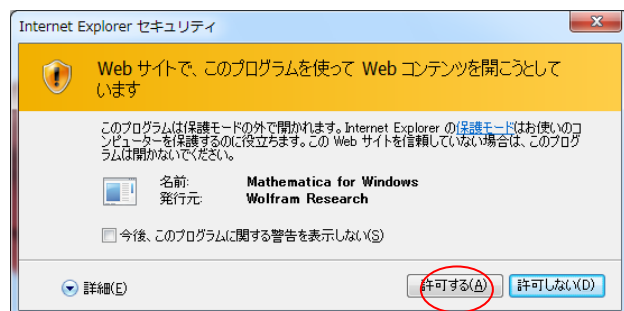

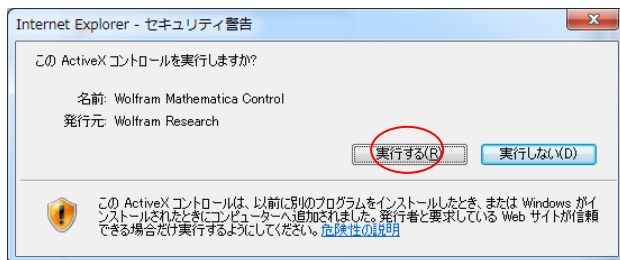

Installing browser plugin for Mathematica

8. The web browser is activated and the security warning dialog box appears that says “This web site wants to run the following add-on “Wolfram Mathematica Control” from “Wolfram Research”. If you trust the website and the add-on and want to allow it to run, click here...” Click “Run Add-on” from the menu and click “Run”.

9. If you see dialog boxes that show security warning messages such as, “Do you want to run this ActiveX control?” or “A website wants to open web content using this program on your computer”, click “Run” and then “Accept”.

10. The web browser plugin was installed successfully when it shows “Installation was completed!” and also when the diagram that is shown here appears.

Activation

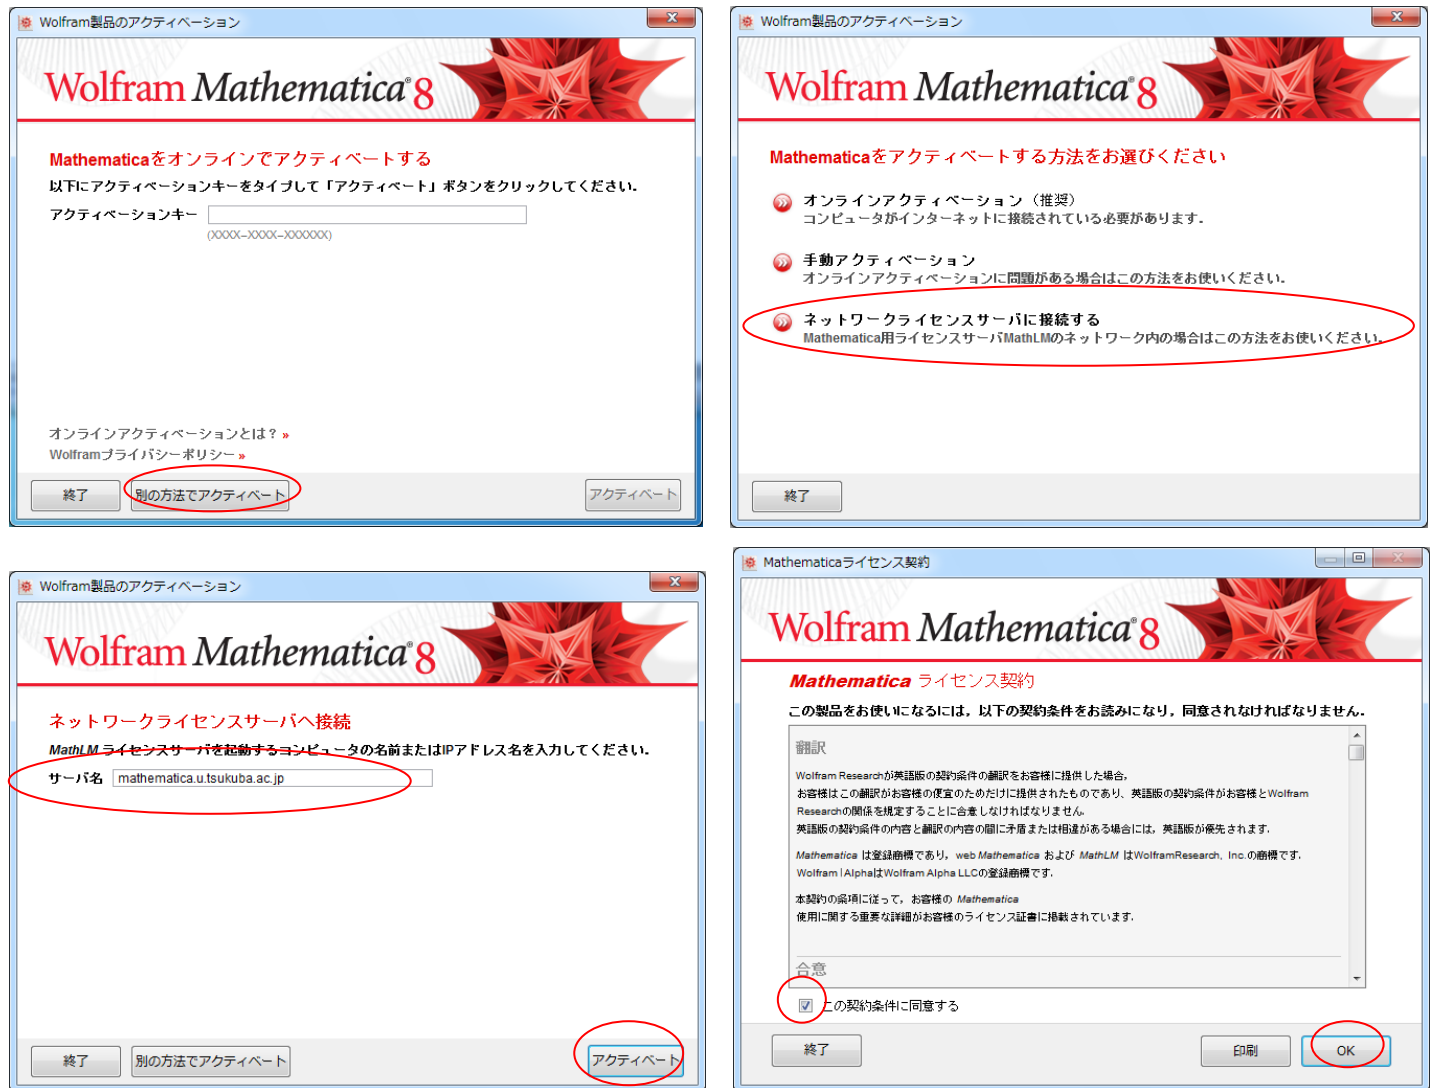

11. As you start up Mathematica, a Wolfram Product Activation dialog page appears.

Click “Other ways to activate”.

Select “Connect to a network license server”.

Enter “mathematica.u.tsukuba.ac.jp” in the “Server name” and click “Activate”.

The “Mathematica License Agreement” dialog box appears. Check the terms and tick the box that says, “I accept the terms of this agreement”, and click “OK”.
