

1. VMware Horizon Client

This chapter describes how to install the “VMware View Client” and connect to a virtual desktop.

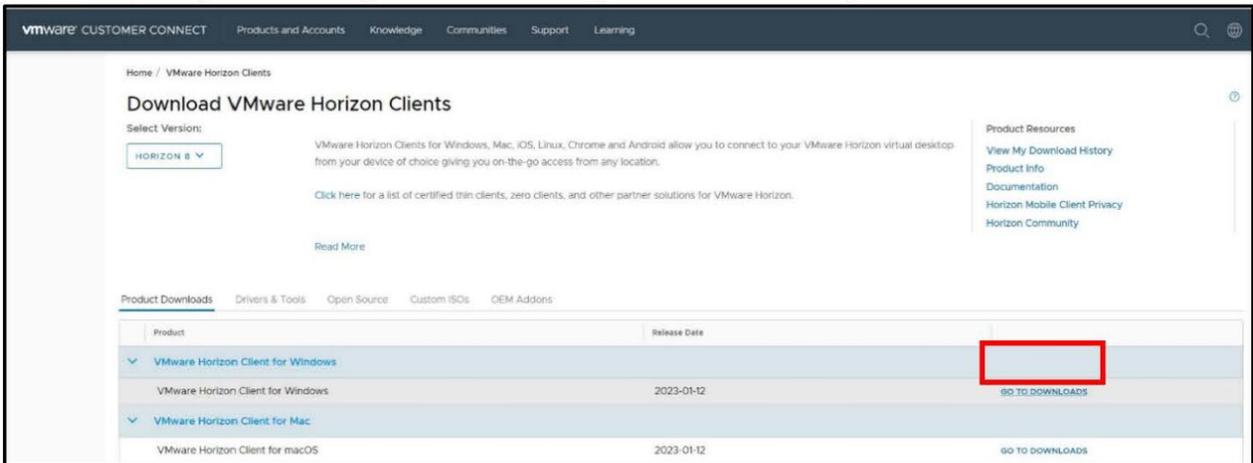

1.1. Download VMware Horizon Client

Start a web browser and go to

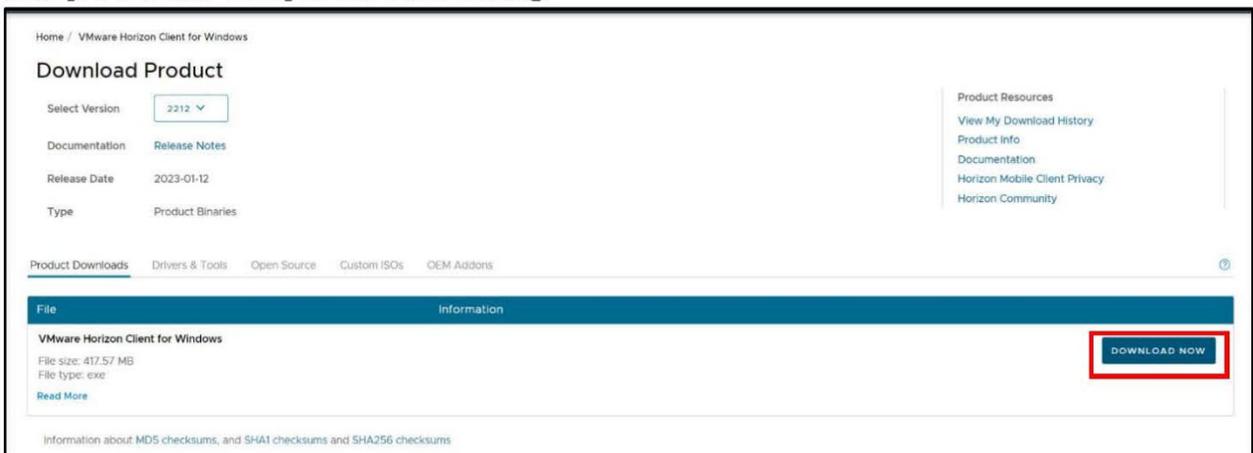

[\[https://customerconnect.vmware.com/jp/downloads/info/slug/desktop_end_user_computing/vmware_horizon_clients/horizon_8\]](https://customerconnect.vmware.com/jp/downloads/info/slug/desktop_end_user_computing/vmware_horizon_clients/horizon_8).

Click [Install VMware Horizon Client].

Select the package for the target Client and click [GO TO DOWNLOADS].

Click [DOWNLOAD NOW] to start downloading.

1.2. Installation of VMware Horizon Client

It is assumed that the VMware Horizon Client installer has already been downloaded to the terminal for virtual desktop connection.

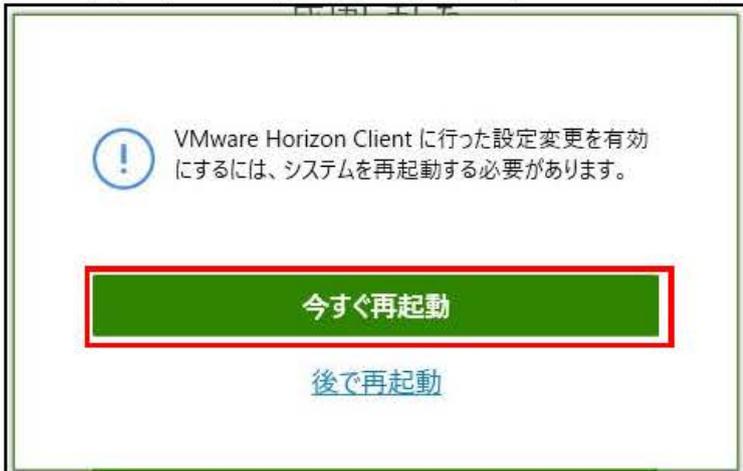

Double-click the VMware Horizon Client installer to run it.
When VMware Horizon starts, click [Accept and Install].

Click [Exit] in the completion window.

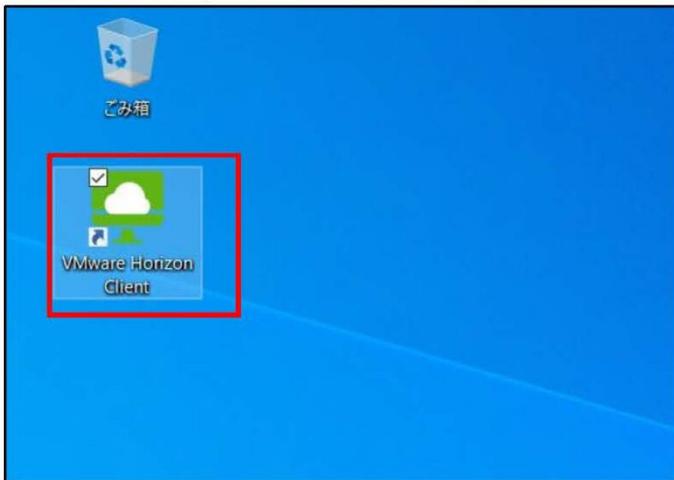

On the pop-up window, click [Restart Now] to restart the system.

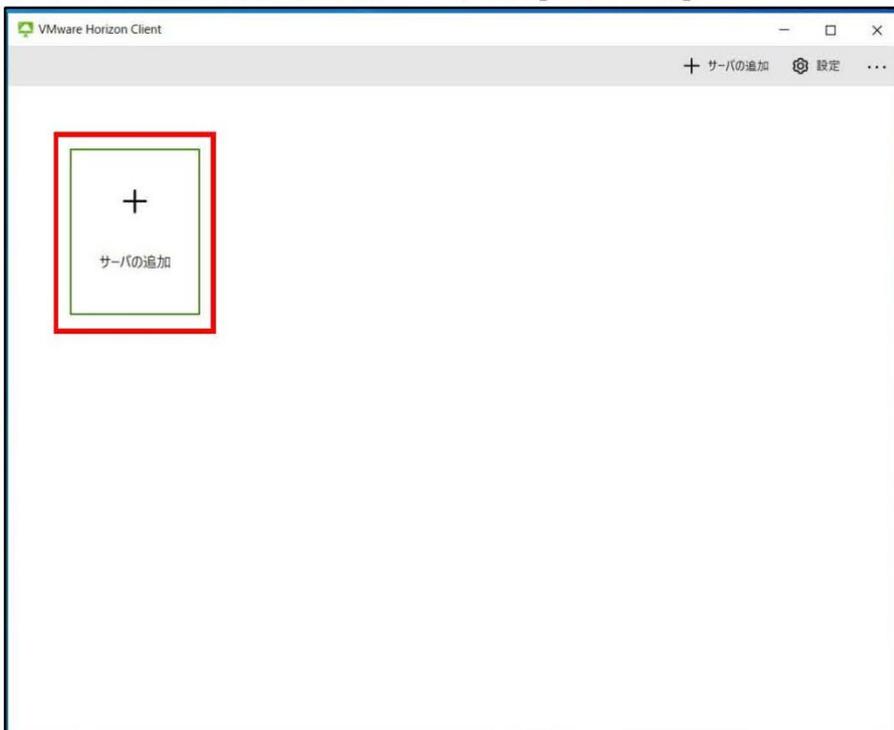

1.3. Connecting to a virtual desktop (Horizon Client)

Double-click the [VMware Horizon Client] icon on the terminal for virtual desktop connection.

After the VMware Horizon Client starts, click [Add Server].

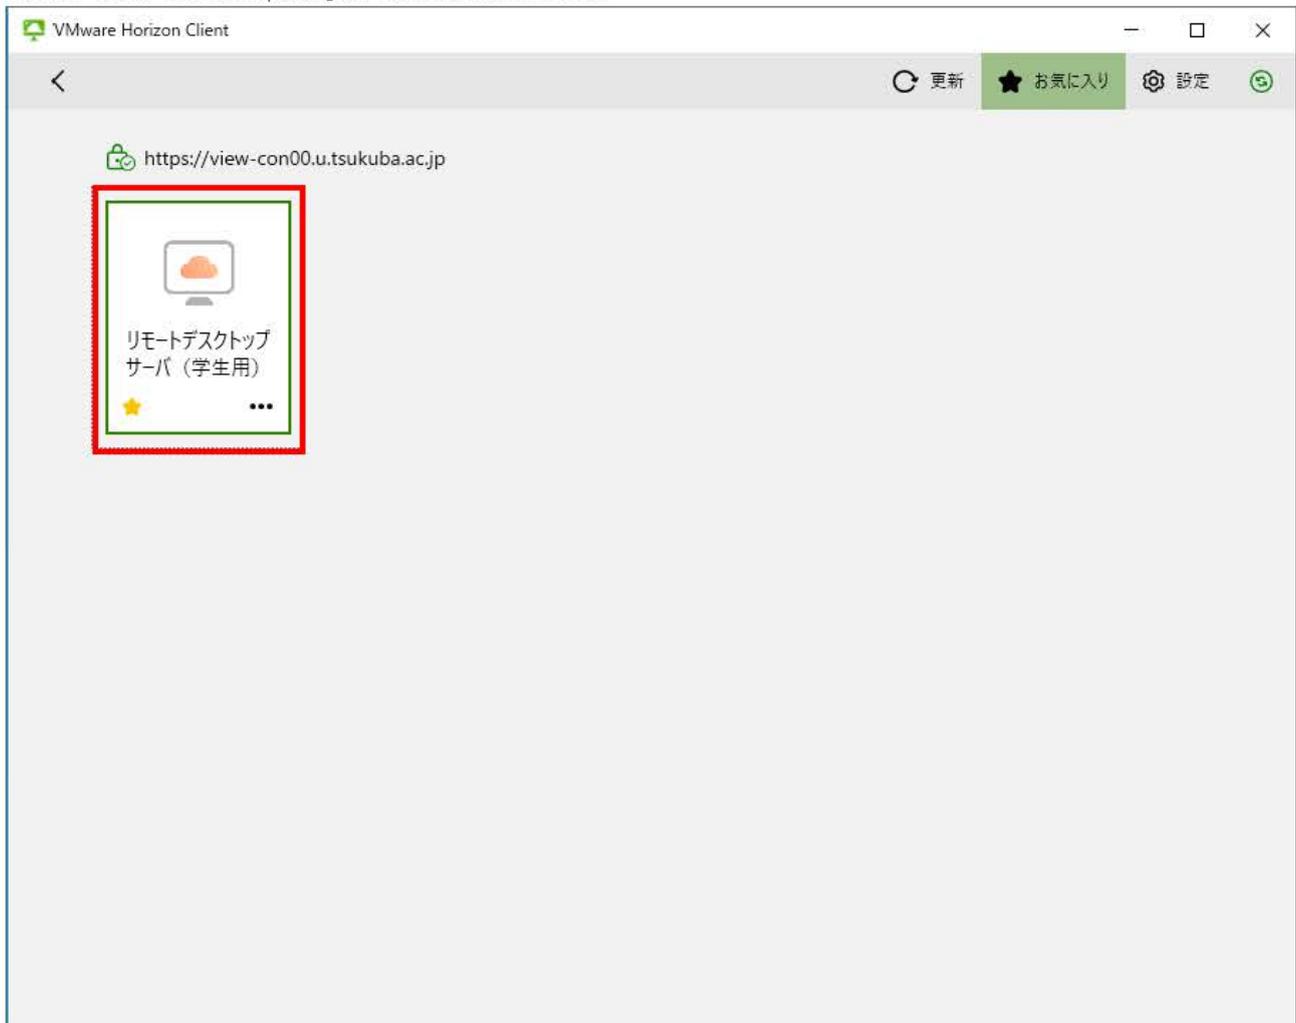

Enter [https://view-con00.u.tsukuba.ac.jp] in the Connection Server Name field and click [Connect].

Connection Server の名前

Enter or select the [User Name], [Password] and [Domain] to log in to the virtual desktop.
Click [Login].

 https://view-con00.u.tsukuba.ac.jp

Double-click the RDS pool you wish to connect to.

Ensure that the virtual desktop starts.
